This is evidenced by the SBS gang, none of which have ever posted a useful article to the Usenet, and all of them, according to the callsign database, are young.

Hmm. Possibly this also serves as a "cooling off" period during which the
new licensee may re-evaluate whether or not he/she really wanted to
put the hammer down. Many senseless transmissions are doubtless avoided
this way.

On the other hand, if they just grab a radio and start bellowing into it
they might never learn about terms like "destinated", "terminated", "QSL"
"HI HI" and other procedural phrases of those in the know.

Todd,

I think it is time to paint your house purple with green trim, and start raising hogs. Also start riding a dirt bike with a straight pipe in a small oval track around your house. Loud parties, Chainsaw at 6:00 am, etc. Tell your neighbors you have taken up some new hobbies since you cannot enjoy your amateur radio hobby without higher antennae.

If you can't beat 'em, piss 'em off.

B-)

<unreasonable one! Why should anyone need more than a rubber duck in <their basement, what with repeaters and all? No, you were definitely <way out of line here. Go thou forth and impale yourself on the Wouff

kim - it'd be funny if it didn't already happen.

was at a meeting with a city board where some old coot popped up and started blathering on and on about how we can talk "all over" with repeaters and how

you could work the Whole City with just a rubber duck antenna inside your house etc.

not that anyone could remember the last time they'd heard the old coot on the air (i recall a mad scramble for a callbook to see if the guy was even legit).

meeting went from very positive to damage control and in an area with lots of old folks with perceived political power, an old coot carries a disproportionate share of the weight in a discussion with political entities.

The Old Coot & his cronies are part of a subset of hams that have just recently picked up on the amateur radio service in order to have "something to do" and could care less about the overall longevity. They're going to die soon and, anyway, it's just something to do. If they can't do radio, they'll be off joining a Golf League or Computer BBSing or fruiting in front of the TV (for you "Family Dog" fans..). They'll come to every radio club meeting in force and tie up any discussion with endless procedural questions and debates as if a radio club is a debating society. Quick to criticize, slow to contribute. And if they aren't contributing, then nobody else should either.

Of course, you don't have to be retirement age to be a Coot, but it can help. You just have to have a superficial interest in amateur radio - with no interest to pursue the full richness of the amateur service beyond ritual communications to others with the same lack of interest.

Most decent organizational constitutions have a means for
the removal of a member from the roles for any number of reasons. If
someone is so disruptive that the organization cannot even conduct
business, boot their asses out.

There is no reason why these guys, coots or not, should not be
expected to act like civilized individuals. If they will not, punt them.

Make them prove it.

>EMF causes cancer. Antennas blow over in strong winds and damage
 ^^^^^^^^^^^^^^^^^

Yeah, like EMF from televisions, radios, SIDs monitors, baby
monitors, garage door openers and etc. DON'T have any effects. Like
the power lines installed by the local-government supported monopoly
power company doesn't. Right.

>surrounding homes. Outdoor antennas weren't allowed in this development.

Like trees and power poles never do, I suppose?

>73,
>Todd
>N9MWB Exiled in snobsville, IL.

Somebody at ARRL needs to start a database of every city and town
that behaves this way. Circulate said listing to ALL amateur radio ops
and their freinds so we know where NOT to move, and further, who to
boycott economically. Make the assholes feel it in what appears to be the
only area they understand....their wallets.

In that case, isn't it a shame that a *lower* antenna will cause a greater
field strength around all these items and thus increase any potential
problems :-)

Added to the fact that you will need to run more power to compensate for the
lower antenna height.

I doubt if it will change anything but you could bring up the subject cos
it might give you some amusement.

What are the 500K US amateurs going to do?
If we don't move there, nobody will notice. We would just be
cutting down our own options.

They'll complain about the rising local taxes, and it will never
cross their mind that a big chunk of what they may consider emergency
preparedness
communications stuff would have been contributed for free by HAMs.
Perhaps we could make a larger economic impact if we... uh...
"marketed ourselves better" (Hate that phrase)

We need to convince John Doe US Citizen that those tall metal towers and
the occasional static on their TV screen is a sign of a properly operating
Emergency Communications System, and that no matter what happens, he/she
lives within walking distance of a spectacularly effective Emergency
Command Center that will remain operational even when all civilized
communication channels have failed.

We need John Doe US to feel nervous in neighborhoods where that guy with
the ham callsign license plates is playing with slinkys hung from
wood stakes in the back yard, installing little tiny wires that people
aren't supposed to be able to see that keep blowing down, and routinely
standing on top of the roof, holding an HT above their head, and yelling
into
the speakermike... ;-)

Yep. That *is* what the rule book says...

> Tell him to go read part 97.

And, if you want it to have some effect other than raising his blood pressure, making him mad and throwing you off the repeater, do it "mano a mano", in private, and calmly, without the apparent self-righteous tone that often creeps in and colors such discussions and suggestions.

Chastising an "Old Buzzard" in public or on the air will cause a fireball of predictable size to raise up and the opposite impact from what you desire...

That said, why does it matter to you, anyway? If you have a good reason then by all means follow the person-to-person (gee, I forgot my political correctness checker in the previous paragraph) approach... if you are seeking to pick nits or pick a fight...forget it. Life is too short to go looking for trouble. There is plenty enough to hunt you down and cause you problems without searching out new human conflict.

Do go to the meeting and DO ask for reasons. By doing that, you establish
a paper trail which you can use if you choose to appeal their decision.
You can then request a copy of the meeting minutes for your case.

>local government how to operate (except for upholding the constitution).
>--

I must disagree.

Amateur Radio is not licensed by local government, but by the Federal agency known as the FCC. If we put ANY part of our hobby in the hands of local government, we will have as many different rules and regs to follow as there ARE local governments.

Indeed, it would be far better for not only the hams in general but I suspect local folks if the FCC were to take charge of the antenna issue. It seems to me that most of the local ordinances regarding this issue are more about harrassment and commercial interest than they are about any serious threat to the public safety (or worse yet, some idiotic notion of the "aesthetic"....it would/will be far LESS aesthetic to have hundreds of dead bodies lying around after a tornado hit than to have had a few ham antennas sticking up and being used to give that little bit extra warning that could have saved those lives.).

As for appealing as a special interest group, we hams are gonna have to learn to play some better hardball than we have up to now. In the face of increasing spectrum pressure, we need to be able to have some means of justifying ourselves if we plan on continuing to HAVE a hobby in the future. If we allow some stupid local ordinance crap to prevent us from being able to *adequately* provide ANY emergency communications, then we are shooting ourselves in the feet on justification, and we are likely to lose far more than just 220 to 222.

There are several areas that need attention. The antenna issue is one of them. Hams need to get themselves exempted from outrageous scanner laws in some states as we are exempted here in Indiana. There are horror stories about hams having HT's confiscated by overzealous cops trying to enforce some stupid portable scanner law.

This should not and must not be tolerated - the FCC is the regulatory agency for Amateur Radio, not the cop down the street.

We need to do some butt-kicking in Washington with our congresscritters to get the FCC off their backsides and get some of our bad-apples OFF the air. Clowns like this moron on 28.325 using every foul word and phrase in the book need to be SHUT DOWN permanently and thrown in jail if that's what it takes to get them off the air. The more of these morons that can be heard, the worse we ALL look in the public eye, for THAT is what they'll remember, NOT the 98 or 99 percent of decent law-abiding hams.

Now having said all of the above, I will also say that I am one of the first who will say that we should shut down the avenues of influence for special interests. BUT - only when everyone gets decent representation out of his or her congresscritter can that happen. And we are gonna have to elect far better congresscritters than we have been for that to happen.

In order for Amateur Radio to not be considered just another special interest, major organizations like the ARRL need to start doing some outreach, and I mean MAJOR outreach efforts to get hams motivated into being more active in public safety and public relations. In order to do that, ARRL members need to get their directors to lay off the trivial tripe reagarding "what column should get published in QST" and get on with something current and important for ALL of Amateur Radio. The same thing goes for the rest of the ham groups.

Am I opinionated? You're damn right I am. It's because I am sick and tired of seeing some of my fellow hams getting screwed by some asswipe local beaurocrat who has nothing better to do while sucking up taxpayer money to sit on his butt.

You must be crazy. The day after I passed my tech exams I went and ordered my first radio, a Kenwood TH-27a. In fact, most people I've talked to bought their radios within a couple of days of passing their first exams.

As for hams that have been around for years and still don't know what to do, I have to agree with you there.

You know, there are some very creative uses for those 4CW1000s that you won't be able to use on the air. Water cooled audio amplifiers coupled with large outdoor speakers, and fed with a 49 MHz scanner tuned to the neighborhood phone and baby monitor frequencies. The mind boggles.
